Creating an Internal Order:	

Overview

Job Aid

Under IPSAS the UN is required to capitalise costs related to Assets under Construction. The use of a cost collector in Umoja allows the UN to easily capture costs related to AuC and also ensure these costs are capitalised monthly.

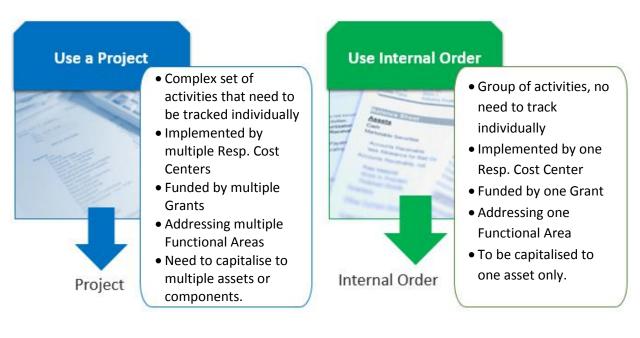

For information regarding IPSAS requirements related to AuC, please refer to www.ipsas.un.org/

This job aid is to be used for the set up of the cost collector for an Asset under Construction, either as project or as an internal order. The review and monthly settlement of the AuC and final settlement are in other job aids, AuC JA 3-2 and JA-3-3, respectively.

Before creating an Asset under Construction, ask the following questions:

- What type of funding? Assessed funds or grants? How many?
- At what level of detail do you need to record costs? How many cost centers / functional areas?
- What type of asset will this be? New Building, Leasehold Improvement, Major Alteration, Infrastructure, or Intangible Asset?
- Do you want to collect costs on an Project with WBS Elements or on an Internal Order?
- How will services and materials be procured? Is a Service Order going to be used for services?

Should you create a project or an internal order?

Users of this guide may have some of the following roles:

- PP.01 Programme_Project: Project_Management_Approver
- PP.02 Programme_Project: Project_Management_User
- FA.15 Financial_Accounting: Asset_Accounting_User
- FA.16 Financial_Accounting: Asset_Accounting_Senior_User

Section 1: Set up an AuC as a Project with WBS Elements

A standard project template which follows the typical componentization of a Building AuC (where the final assets are the sub-components) exists in the system. To use this as a starting point for your AuC, follow the instructions directly below, otherwise look at the section on creating a project from scratch.

Componentisation of a building in Umoja is in accordance with UN IPSAS Corporate Guidance (please refer to UN Policy Frame work for IPSAS and also UN Corporate Guidance for IPSAS #10, PPE) at www.ipsas.un.org

Creating a Project from a Standard Project Definition template:

The steps to create a new Project and its WBSEs for an AuC are as follows:

1. Login to Umoja ECC.

** You must have the FA.16, PP.01, or PP.02 security authorizations to create a project.

- Execute transaction code CJ2ON, or navigate to the following path in the SAP Menu... Accounting → Project System → Project → Project Builder
- 3. Click on the 'Create' icon and then select 'Copy project'. This will open the 'Create Project' window.

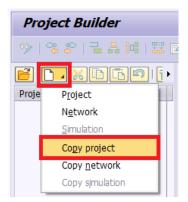

Project Def.: Click on the binoculars icon next to the 'Project Def.' field. A value should appear in this field. It is ok if it says "test", a new project definition ID will be generated later.

Description: Fill in a description of this AuC.

Std proj. def.: Click on the entry field for 'Std proj. def.' and then click on the a search help window. Click on the green checkbox to display the list of standard projects. Select the one you want by double-clicking on it.

When done making the above selections, click on the green check at the bottom of the 'Create Project' window to proceed.

🔄 Create Project	☞ Standard WBS to be copied (1) 1 Entry found

	1 Entry found

5. You will see an Error message. Ignore it and click on the green check to continue.

6. In the 'Check Required Fields' screen, fill out the following fields:

Start date and Finish date: Fill in planned dates here. These can be changed later, if necessary.

Business Area: This should be changed to your local business area code.

Functional Area: Select an appropriate functional area for this project. This field is mandatory at this time and will be defaulted into each WBS Element, though it is the WBS Element's functional area that is ultimately responsible for budget and postings. Note that this default value may not apply to all WBS Elements, so care should be taken to review when later defining each WBS Element.

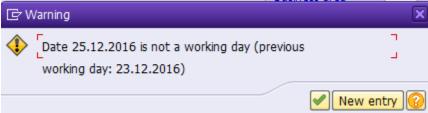

Profit Center: Enter the default profit center '9999'

Click on the green check at the bottom when ready to continue. The other tabs at the top 'Control', 'Admin', 'LongText', and 'cProjects' do not need to be filled out at this time.

You may receive a warning message similar to this if either of your dates falls on a non-working day (e.g. weekend). You may go back and manually adjust the date by selecting 'New entry', or you can accept the suggested 'previous working day' by clicking on the green check.

7. Click on the green check when you see this message. This is expected.

8. You will now be greeted with the Project Builder interface.

9. The Project Definition has been prepared already from the standard project definition and any values entered during Step 6. Now the WBS Elements need to be customized for this project.

Select the top (Level 1) WBS Element by clicking on it in the project tree.

10. First, update the Level 1 WBS Element.

Start by updating the WBS Element Description to match the description you gave to the Project Definition. This is a standard convention that the Project Definition and Level 1 WBS Element share the same description.

Identification and	view selection	
WBS Element	AA-000012	Real Estate AuC Building
Detail:		
Overview(s):		

Basic Data tab:

Responsible Cost Center: Enter company code 1000 and the Cost Center for this WBSE.

For all WBSE elements that should not be used to charge costs the box "Acct asst elem." should be unchecked. This will mean that users of the shopping carts etc cannot use these lines to charge costs to. This will be the case for all level 1 WBSE.

11. Now, move on to the Level 2 WBS Elements. The procedure is the same as in the previous step.

You may edit many WBS Elements at once in a tabular format by switching to the 'WBS Element Overview.' This may be a more efficient way of viewing and managing the different properties of each WBS Element. The exception to this is the attributes found on the 'UN Assignments' tab will not be shown in the Overview table, otherwise everything else is available in this overview.

Identification and view selection				
WBS Element	AA-000012.02	Foundation & Basements (EXFB)	🗌 🖻 👧	
Detail:				
Overview(s):				

	unos de seres t	Description	ch - + 70	-			0.5	
	WBS element	Description	Short ID	Тур	Pri	Su	PE	A
<u>í</u> 1	AA-000012	Real Estate AuC Building	AA-000012	F1				
2	AA-000012.01	Non-Capitalisable Costs	AA-000012.01	F1				
2	AA-000012.02	Foundation & Basements (EXFB)	AA-000012.02	F1				
2	AA-000012.03	Superstructure (EXSS)	AA-000012.03	F1				
2	AA-000012.04	Exterior Closure (EXEC)	AA-000012.04	F1				
2	AA-000012.08	Plumbing (SVPB)	AA-000012.08	F1				
2	AA-000012.09	HVAC (SVHV)	AA-000012.09	F1				

Here you can see and edit all of the WBS Elements and most of their attributes.

Note: Ensure that the Functional Area ('Organization' tab) correctly matches that of the Cost Center ('Responsibilities' tab) for each WBSE. If the functional area is not correctly aligned with the cost center at the WBSE level then the entity will receive budget exceeded messages. You can confirm the Functional Area assigned to each Cost Center with transaction **KS03.

12. Fill out the necessary fields for all remaining WBS Elements.

** Only bottom-level WBS Elements should collect expenses, and therefore all 'parent' WBS Elements should have their **Acct assn elem.** Indicator unchecked on the 'Basic Data' tab.

13. If you need to add a new WBS Element...

Determine which WBS Element you'd like to insert the new one beneath. If you want to add a Level 2 WBSE, choose the Level 1 WBSE. In the example screenshot below, we are creating a Level 3 WBSE beneath the "Non-Capitalisable Costs" Level 2 WBSE.

Create a new WBS Element by right-clicking on an existing WBS Element and selecting Create \rightarrow WBS element.

• 🛆 Furniture	AA-000012.01.01
 A Foundation & Baseme 	AA-000012.02

14. If you expect to have **capitalisable** charges that will be distributed across multiple final assets (i.e. building subcomponents) when the project is completed, AND you cannot define a % split when the shopping cart/Purchase order is set up, you can add an extra WBS Element to collect these costs during construction/development, calling this WBSE "Other Capitalisable Costs". At final project settlement, you settle these charges to multiple final assets on a percentage basis (this will be covered in Job Aid JA3-3). It is recommended that you keep charges to this WBSE to a minimum to avoid a lengthly review process of expenses charged to this WBSE when the AuC is finalised.

Note: non-capitalisable costs should NOT be charged to this WBSE, if part of the costs are capitalisable and part not capitalisable this split must be done at the time of the financial commitment.

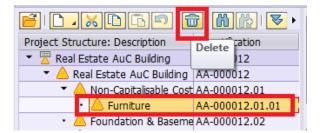

Follow the instructions in the previous step to add the WBS Element. Be sure to give it a description that communicates its intended use, such as "Other Capitalisable Costs".

For example:

If your project will have service charges that will be capitalised across many of the building's subcomponents (Foundation, Superstructure, Roof, Interior construction, etc), you could charge the "Other Capitalisable Costs" WBS Element. At final settlement, the entity would need to review the charges to this WBSE and define multiple settlement rules (on a percentage basis) for this WBS Element to the final assets of each of the subcomponents.

15. If you want to remove an existing WBS Element, select it in the tree view and then click on the 'Delete' 🔟 button.

Confirm that you want to delete the WBS Element.

C Delete WBS elements							
	1 WBS elements						
0	will be deleted						
Yes No X Cancel							

16. When you have added, removed, and updated all of the WBS Elements, save the project by clicking on the 'Save' 🗔 icon at the top of the screen.

You should see a message in the status bar similar to this, and the project will be closed. Project AA-000012 is being created

17. After initiation creation, you will want to update the status of your project. In order to release the project, you will have to take 3 steps:

First step: Update the User Status of each WBS Element from '10: IPP' to '20: UBR'

Second step: Update the User Status of each WBS Element from '20: UBR' to '30: RFR'

Third step: Update the System Status of the Project Definition to Released.

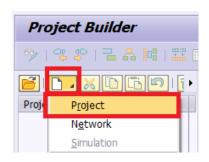

Instructions on changing the User Status and System Status are covered the section "Updating the Project/WBSE Status".

Creating a Project from scratch:

The steps to create a new Project and its WBS Elements for an AuC are as follows:

- Login to Umoja ECC.
 ** You must have the FA.16, PP.01, or PP.02 security authorizations to create a project.
- Execute transaction code CJ2ON, or navigate to the following path in the SAP Menu... Accounting → Project System → Project → Project Builder
- 3. Click on the 'Create' icon and then click 'Project'
- 4. Give the project a description...

Give the project a descripti	on

14. Repeat steps 10-13 for all other required WBS Elements.

- 15. As mentioned in the earlier section, if you expect to have **capitalisable** charges that will be distributed across multiple final assets or subcomponents when the project is completed and you cannot define a % split when the shopping cart/Purchase order is set up, you can add an extra WBS Element to collect these costs during construction/development, calling this WBSE "Other Capitalisable Costs". At final project settlement, you settle these charges to multiple final assets on a percentage basis (this will be covered in Job Aid JA3-3). It is recommended that you keep charges to this WBSE to a minimum to avoid a lengthly review process of expenses charged to this WBSE when the AuC is finalised.
- 16. When you have added all required WBS Elements, save the project by clicking on the 'Save' ⊟ icon at the top of the screen.

You should see a message in the status bar similar to this, and the project will be closed.

Project AA-000014 is being created

17. After initiation creation, you will want to update the status of your project. In order to release the project, you will have to take 3 steps:

First step: Update the User Status of each WBS Element from '10: IPP' to '20: UBR'

Second step: Update the User Status of each WBS Element from '20: UBR' to '30: RFR'

Third step: Update the System Status of the Project Definition to Released.

Instructions on changing the User Status and System Status are covered in the next section.

Updating the Project/WBSE Status:

A project goes through several statuses before it can be used. There are actually two types of status in Umoja, 'System Status' and 'User Status'. Each WBS Element, and the Project Definition, has its own status.

User	User	User	System	User
Status: IPP	Status: UBR	Status: RFR	Status: REL	Status: RAB

System Status	User Status	State of the Project / Actions
CRTD - Created	IPP – Initial Project Planning	Initial Status of Project / WBS Elements.
CRTD - Created	UBR – Under Budget Review	All WBS Elements have been defined and the project is ready to have budget allotted.
CRTD - Created	RFR – Ready for Release	Budget has been allotted. It is ready to be released. **Note: Only users assigned the FA.16 – Asset Accounting Senior User or PP.01 – Project Management Approver can set this status.
REL - Released	RFR – Ready for Release	The project has been released. Individual WBS Elements can now have their User Status set to Ready for Release.
REL - Released	RAB – Released and Budgeted	The project is Released and Budgeted. Goods and services can now be procured against these WBS Elements.

The steps to update a project's User Status are as follows

- Execute transaction code CJ2ON, or navigate to the following path in the SAP Menu... Accounting → Project System → Project → Project Builder
- 2. Reopen the project you created earlier by either clicking on the 'Open' [□] icon and entering the project definition number, or by clicking on the dropdown arrow () next to 'Last Projects Processed' and double-clicking your new project.

The steps to update a project's System Status to Released are as follows:

- Execute transaction code CJ20N, or navigate to the following path in the SAP Menu... Accounting → Project System → Project → Project Builder
- 2. Reopen the project you created earlier. All WBS Elements should be in status RFR (Ready for Release) in order to release the project.
- 3. Select the Project Definition (the top line in the Project Structure Tree) and then select '*Edit* \rightarrow *Status* \rightarrow *Release*' from the top menu bar.

- 4. Save 🗄 the Project.
- 5. Before posting to any of the WBS Elements, the User Status must be updated once again to RAB (Released and Budgeted). This should not be done, however, until budget has been allocated by FM or GM colleagues.

Updating the Budget Control WBSE field for FM/GM Users:

A special transaction code exists for determining where each WBS Element derives its budget from. This enables FM and GM users access to allocate budget to projects without giving them access to change any other project fields. You may have already defined this for your project in the 'UN Assignments' tab of each WBSE, but this is an alternative specifically for FM and GM users. Asset and Project Management users cannot use this transaction without having the appropriate FM or GM authorizations.

Enter transaction code **ZPJWBS** and then enter selection criteria (usually just the project you wish to modify) and click on execute.

Budget Control WBSE			

Ensure that higher-level WBS elements cannot incur expenses:

It is good practice to only collect costs at the lowest level WBS Elements within the structure. If a WBS Element has 'children', then it probably should not be charged to. Charging to these 'parent' WBS Elements can be prevented by ensuring the **Acct asst elem.** indicator is **not** checked (expenditure will then not be able to be charged to this WBSE, however budget can still be assigned).

The steps to review and change WBS Elements so that they cannot be charged to are as follows:

- Enter transaction code CJ20N
 ** You must have the FA.16, PP.01, or PP.02 security authorizations to make this change.
- 2. Open the project you created earlier by clicking on the 'Open' \overrightarrow{E} icon and entering the project definition number, or by opening it from the Worklist \rightarrow 'Last Projects Processed' section.
- 3. From the project structure tree on the left, find each of the WBS Elements that should not be able to incur expenses.

In this example screenshot, we have 3 'parent' WBSEs that should have the **Acct asst elem.** Indicator unchecked.

Project Structure: Description Identification

- 5. When you have repeated steps 4 and 5 for all parent WBSEs, you just need to **Save** 📛 the project.
- **NOTE:** The Acct asst elem. Indicator becomes unchangable once the project or WBSE's System Status is set to *Released*. Be sure to confirm the appropriate checkbox status before releasing.

Review that budget has been assigned to the project:

All projects will have one or more 'Budget Control WBSEs'. These are WBSEs within the project that receive budget allocations. The other WBSEs on the project will reference these Budget Control WBSEs in the 'UN Assignments' tab and derive/share their budget from it.

The following instructions detail how to review the status of budget for each Budget Control WBSE.

The steps to review the budget for a project are as follows:

- Enter transaction code ZPJPRJBUDBAL
 ** Any Fixed Asset or Project Management users can access this transaction.
- 2. Enter the project or WBSEs that you wish to review and click on Execute.

	AA-000005 33	BACB001			10RCR	281,240.81	0.00	281,240.81	0.00	210,274.03-	0.00	210,274.03-	70,966.78

Note: Take care to ensure that the Functional Area aligns correctly with the Cost Center. WBS Elements inherit the Functional Area from that of the Project Definition, so if the Cost Center has a different Functional Area then the Functional Area would need to be manually corrected. Use **KS03 to review which Functional Area belongs to which Cost Center.

Create Settlement Rules for Non-Capitalisable WBS Elements:

Settlement rules must be created for each WBS element that will be settled to a cost center (non-capitalisable AuC costs). This is not required forWBS elements that are settling to an AuC asset because those settlement rules are automatically generated during settlement (it will need to be done later however when you are settling to the final asset).

Notes:

- Settlement Rules must be maintained for the lowest level WBS elements where the expenditures have been incurred.
- If a service order is used, the expenditures incurred for the service order must first be settled to the project and then to the AuC.

The steps to update Settlement Rules for WBS Elements are as follows:

- Enter transaction code CJ20N
 ** You must have the FA.16, PP.01, or PP.02 security authorizations to create settlement rules.
- Open the project you created earlier by either clicking on the 'Open' ¹ icon and entering the project definition number, or by doubleclicking on it in the Worklist → 'Last Projects Processed' section.
- 3. From the project structure tree on the left, select the WBS Elements for which settlement rules need to be created. You will have to create them one WBS Element at a time (repeat steps 4 and 5 for each one).

6. Press the Enter key on your keyboard, and then click the **Save** 🔚 icon in the initial screen (the project builder).

Again note, for all **WBS Elements** with a selected Investment Profile, a **Settlement Rule** to the corresponding AuC will be generated automatically.

If your AuC project has already been released, but you need to add an Investment profile to it, there are a few additional steps to complete compared to adding an Investment profile to an unreleased project.

1. Execute Transaction code CJ20N and open the project.

Job Aid

- 2. Select the WBS Element you wish to create an Investment profile for. Go to the 'Control' tab.
- 3. From the Control tab, select the appropriate Investment profile for this WBS Element.

Creating an Internal Order:

The steps to create a new Internal Order for an AuC are as follows:

- Login to Umoja ECC.
 ** You must have the FA.16 (Senior User) security authorization to create an Internal Order.
- Execute transaction code KO01, or navigate to the following path in the SAP Menu... Accounting → Controlling → Cost Element Accounting → Master Data → Accrual Order → Create
- Select 'Order Type' 1150 "Capital Activities (AuC)" and press the Enter key. (If you know of a similar Internal Order that you wish to copy, you can enter its # in the Reference section).

Create Interna	al Order: Initial screen
📳 Master Data	
Order Type	1150
Reference	
Order	

4. On the 'Create Internal Order' screen, fill in the following fields on the 'Assignments' tab:

Description: Fill in a description of this AuC.

Profit Center: Enter the default profit center '9999' **Responsible CCtr:** Enter the responsible Cost Center. This will derive the business area and functional area.

Work Start and End of Work: Fill in planned dates here. These can be changed later, if necessary.

User Responsible: Enter an Umoja User ID of the person responsible for this AuC. You can use the the icon to search for someone by their name if you do not know their user id.

External order no.: If this AuC should reference a specific order number outside of Umoja, you can enter it here.

Person responsible: Enter the name of the person responsible for this AuC **Telephone:** Enter the telephone number of the 'Person responsible' **Department:** Enter the department responsible for this AuC.

Create Internal Order: Master data
