

UCM INSPECTION AND VERIFICATION REPORTS TIPS & FEATURES

5 TIPS

VRs are dependent upon completed inspection records

Use eCOE enhancements for VRs to record quantitative data for reimbursements to T/PCCs

Submission of VRs should follow approved quarterly deadlines

It's important to ensure the signed VR is uploaded to the right annex (i.e. SS or ME) of the VR

The status of painting will impact serviceability of vehicles only

6 FEATURES

Senior Advisory Group (SAG) will now provide records of absence and non-functionality based off of inspection records and the MOU Annex B

Surplus equipment as per MOU Annex B used in lieu of absent or non-functional equipment, previously reported as free text remarks, can now be reported in the 'In lieu of' tab

If you must refresh your VR, know that the following information must be re-entered:

Major Equipment: SAG data

1. Days (Srv)
2. Days (Unsrv)
3. Records of an equipment associated to ILO when the line item was in use

Self-Sustainment:

VRs capture all periods of unacceptability directly from the inspection records. If changes are required to the VR, inspection records must be updated first

The Cease of Date previously recorded as remarks should now be entered in the Cease of Date field

In the VR screen, an attachments view is now available to upload documents related to respective units

In the system documents screen important reference documents can be accessed (e.g. COE manual, SOPs, policies)
